

HILLSBOROUGH TOWNSHIP SCHOOL DISTRICT

MATHEMATICS CURRICULUM

Grade 6

July, 2020

Course Overview

Grade 6

The grade six mathematics program emphasizes the following content clusters as they align with the grade six New Jersey Student Learning Standards adopted by the state of New Jersey: ratios and proportional relationships, the number system, expressions and equations, geometry, and statistics and probability. The content is presented using a problem solving approach designed to develop critical thinking skills within real world situations. The New Jersey Student Learning Standards for Mathematical Practice: make sense of problems and persevere in solving them; reason abstractly and quantitatively; construct viable arguments and critique the reasoning of others; model with mathematics, use appropriate tools strategically; attend to precision; look for and make use of structure; and look for and express regularity in repeated reasoning are embedded in the daily teaching and learning. Practice of basic skills is ongoing through a variety of routines and activities. Topics are revisited regularly and practice is distributed over time to facilitate full concept development. Activities explore a wide variety of content with opportunities for students to apply basic skills to geometry, fractions, decimals, percents, measurement, statistics, and algebra. Program implementation and assessment offer enrichment and reinforcement based on individual student needs. The grade six mathematics program prepares students to take the New Jersey Student Learning Assessment (NJSLA) or any next generation assessment. Successful completion of the sixth grade mathematics program prepares students for entry into the seventh grade mathematics program.

Hillsborough Township Public Schools
Grade 6 Mathematics Curriculum

Unit Title: Unit 1 Numerical Expressions and Factors	Timeframe/Pacing: 17 days
Essential Questions <ul style="list-style-type: none"> ● How are factors and multiples related? ● What are expressions and how can they be evaluated? 	
Enduring Understandings <ul style="list-style-type: none"> ● Factors break numbers down and are finite. Multiples are infinite. ● Expressions are mathematical statements without an equal sign and can be evaluated using order of operations ● Numeric fluency includes both the understanding of and the ability to appropriately use numbers. 	
Standards Taught and Assessed <p>■ Major Cluster</p> <ul style="list-style-type: none"> ● 6.EE.A.1 Write and evaluate numerical expressions involving whole-number exponents. <p>⊙ Additional Cluster</p> <ul style="list-style-type: none"> ● 6.NS.B.4 Find the greatest common factor of two whole numbers less than or equal to 100 and the least common multiple of two whole numbers less than or equal to 12. Use the distributive property to express a sum of two whole numbers 1–100 with a common factor as a multiple of a sum of two whole numbers with no common factor. For example, express $36 + 8$ as $4(9 + 2)$. 	
Highlighted Interdisciplinary Connections <ul style="list-style-type: none"> ● 8.1.8.DA.5: Test, analyze, and refine computational models 	
Highlighted Career Ready Practices and 21st Century Themes and Skill <ul style="list-style-type: none"> ● 9.3.ST.2 - Use technology to acquire, manipulate, analyze and report data. 	
Social Emotional Learning Competencies <ul style="list-style-type: none"> ● 2.1.8.EH.1: Compare and contrast stress management strategies that are used to address various types of stress-induced situations (e.g., academics, family, personal relationships, finances, celebrations, violence). ● 2.1.8.EH.2: Analyze how personal attributes, resiliency, and protective factors support mental and emotional health.

Unit Title: Unit 3 Ratios and Rates	Timeframe/Pacing: 24 days
Essential Questions	
<ul style="list-style-type: none"> ● How can ratios and proportional relationships be used to determine unknown quantities? 	
Enduring Understandings	
<ul style="list-style-type: none"> ● Ratios and proportional relationships are used to express how quantities are related and how quantities relation to each other. 	
Standards Taught and Assessed	
<p>■ Major Cluster</p> <ul style="list-style-type: none"> ● 6.RP.A.1 Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. For example, “The ratio of wings to beaks in the bird house at the zoo was 2:1, because for every 2 wings there was 1 beak.” “For every vote candidate A received, candidate C received nearly three votes.” ● 6.RP.A.2 Understand the concept of a unit rate a/b associated with a ratio $a:b$ with $b \neq 0$, and use rate language in the context of a ratio relationship. For example, “This recipe has a ratio of 3 cups of flour to 4 cups of sugar, so there is $3/4$ cup of flour for each cup of sugar.” “We paid \$75 for 15 hamburgers, which is a rate of \$5 per hamburger.” ● 6.RP.A.3 Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations. <ul style="list-style-type: none"> a. Make tables of equivalent ratios relating quantities with whole number measurements, find missing values in the tables, and plot the pairs of values on the coordinate plane. Use tables to compare ratios. b. Solve unit rate problems including those involving unit pricing and constant speed. For example, if it took 7 hours to mow 4 lawns, then at that rate, how many lawns could be mowed in 35 hours? At what rate were lawns being mowed? d. Use ratio reasoning to convert measurement units; manipulate and transform units appropriately when multiplying or dividing quantities. 	
Highlighted Interdisciplinary Connections	
<ul style="list-style-type: none"> ● MS-ESS1-3 Analyze and interpret data to determine scale properties of objects in the solar system. 	
Highlighted Career Ready Practices and 21st Century Themes and Skill

Unit Title: Unit 4 Percents	Timeframe/Pacing: 16 days
Essential Questions <ul style="list-style-type: none">• What is the relationship between fractions, decimals, and percents?• How can computational strategies be applied to practical situations?	
Enduring Understandings <ul style="list-style-type: none">• One representation may sometimes be more helpful than another; used together, multiple representations give a fuller understanding of a problem.• Computational fluency includes understanding the meaning and the appropriate use in given situations.	
Standards Taught and Assessed ■ Major Cluster <ul style="list-style-type: none">• 6.RP.A.3 Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations. c. Find a percent of a quantity as a rate per 100 (e.g., 30% of a quantity means 30/100 times the quantity); solve problems involving finding the whole, given a part and the percent• 6.NS.C.7 Understand ordering and absolute value of rational numbers. a. Interpret statements of inequality as statements about the relative position of two numbers on a number line diagram. For example, interpret $-3 > -7$ as a statement that -3 is located to the right of -7 on a number line oriented from left to right. b. Write, interpret, and explain statements of order for rational numbers in real-world contexts. For example, write -3 degrees C $>$ -7 degrees C to express the fact that -3 degrees C is warmer than -7 degrees C.	
Highlighted Interdisciplinary Connections <ul style="list-style-type: none">• MS-LS3-1 Develop and use a model to describe why asexual reproduction results in offspring with identical genetic information and sexual reproduction results in offspring with genetic variation.	
Highlighted Career Ready Practices and 21st Century Themes and Skill <ul style="list-style-type: none">• 9.1.8.EG.1: Explain how taxes affect disposable income and the difference between net and gross income• 9.1.8.EG.2: Explain why various sources of income are taxed differently

Unit Title: Unit 5 Algebraic Expressions and Properties	Timeframe/Pacing: 20 days
Essential Questions <ul style="list-style-type: none">• How can algebraic representations be used to generalize patterns and relationships?	
Enduring Understandings <ul style="list-style-type: none">• The symbolic language of algebra is used to communicate and generalize the patterns in mathematics.	
Standards Taught and Assessed ■ Major Cluster <ul style="list-style-type: none">• 6.EE.A.2 Write, read, and evaluate expressions in which letters stand for numbers.<ul style="list-style-type: none">a. Write expressions that record operations with numbers and with letters standing for numbers. For example, express the calculation “Subtract y from 5” as $5 - y$.b. Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, coefficient); view one or more parts of an expression as a single entity. For example, describe the expression $2(8 + 7)$ as a product of two factors; view $(8 + 7)$ as both a single entity and a sum of two terms.c. Evaluate expressions at specific values of their variables. Include expressions that arise from formulas used in real-world problems. Perform arithmetic operations, including those involving whole number exponents, in the conventional order when there are no parentheses to specify a particular order (Order of Operations). For example, use the formulas $V = s^3$ and $A = 6s^2$ to find the volume and surface area of a cube with sides of length $s = 1/2$.• 6.EE.A.3 Apply the properties of operations to generate equivalent expressions. For example, apply the distributive property to the expression $3(2 + x)$ to produce the equivalent expression $6 + 3x$; apply the distributive property to the expression $24x + 18y$ to produce the equivalent expression $6(4x + 3y)$; apply properties of operations to $y + y + y$ to produce the equivalent expression $3y$.• 6.EE.A.4 Identify when two expressions are equivalent (i.e., when the two expressions name the same number regardless of which value is substituted into them). For example, the expressions $y + y + y$ and $3y$ are equivalent because they name the same number regardless of which number y stands for.

Hillsborough Township Public Schools
Grade 6 Mathematics Curriculum

Unit Title: Unit 8 Integers, Number Lines, and the Coordinate Plane	Timeframe/Pacing: 23 days
Essential Questions <ul style="list-style-type: none">• How can we compare and contrast rational numbers?	
Enduring Understandings <ul style="list-style-type: none">• Rational numbers can be represented in multiple ways and are useful when examining situations involving numbers that are not whole.	
Standards Taught and Assessed ■ Major Cluster <ul style="list-style-type: none">• 6.NS.C.5 Understand that positive and negative numbers are used together to describe quantities having opposite directions or values (e.g., temperature above/below zero, elevation above/below sea level, credits/debits, positive/negative electric charge); use positive and negative numbers to represent quantities in real-world contexts, explaining the meaning of 0 in each situation.• 6.NS.C.6 Understand a rational number as a point on the number line. Extend number line diagrams and coordinate axes familiar from previous grades to represent points on the line and in the plane with negative number coordinates.<ul style="list-style-type: none">a. Recognize opposite signs of numbers as indicating locations on opposite sides of 0 on the number line; recognize that the opposite of the opposite of a number is the number itself, e.g., $-(-3) = 3$, and that 0 is its own opposite.b. Understand signs of numbers in ordered pairs as indicating locations in quadrants of the coordinate plane; recognize that when two ordered pairs differ only by signs, the locations of the points are related by reflections across one or both axes.c. Find and position integers and other rational numbers on a horizontal or vertical number line diagram; find and position pairs of integers and other rational numbers on a coordinate plane.• 6.NS.C.7 Understand ordering and absolute value of rational numbers.<ul style="list-style-type: none">a. Interpret statements of inequality as statements about the relative position of two numbers on a number line diagram. For example, interpret $-3 > -7$ as a statement that -3 is located to the right of -7 on a number line oriented from left to right.b. Write, interpret, and explain statements of order for rational numbers in real-world contexts. For example, write $-3 \text{ } ^\circ\text{C} > -7 \text{ } ^\circ\text{C}$ to express the fact that $-3 \text{ } ^\circ\text{C}$ is warmer than $-7 \text{ } ^\circ\text{C}$.c. Understand the absolute value of a rational number as its distance from 0 on the number line; interpret absolute value as magnitude for a positive or negative quantity in a real world situation. For example, for an account balance of -30 dollars, write $-30 = 30$ to describe the size of the debt in dollars.d. Distinguish comparisons of absolute value from statements about order. For example, recognize that an account balance less than -30 dollars represents a debt greater than 30 dollars.
